

Sapphire 1:4

Concentrated chlorhexidine gluconate/lactic acid teat disinfectant

Specially formulated with dual biocides to provide excellent bactericidal properties and glycerol to condition and protect the skin.

Passes EN 1656; effective against a wide range of organisms in the presence of organic matter.

Hard water tolerant; effective in all water conditions.

- Gentle and non-irritating to the skin; specially selected mild surfactant.
- Contains emollient glycerol, to smooth and soften the skin and reduce cracks and crevices where bacteria may multiply.
- Also passes EN 1657.
- Dark blue colour; indicates which cows have been effectively dipped or sprayed.
- Economical in use; concentrated formulation to be diluted before use.

DIRECTIONS FOR USE:

Prepare a solution in a clean container by adding one part product to four parts clean water and mix well. Solution must be used within seven days.

Prepare a fresh solution daily if the water is known to contain sulphates above 250ppm.

PRE-MILKING FOAM DIPPING:

To be used prior to milking.

Fill a foaming teat dip cup about two thirds full with prepared solution and squeeze cup to generate the foam. Dip teats into the foam and wipe clean using individual cloths or disposable paper towels.

POST-MILKING DIPPING:

Fill the teat dip cup about two thirds full with prepared solution. Dip teats of every cow immediately after each has been milked, making sure that the full length of the teat is immersed.

Top up with fresh solution as required. Empty and wash out cups after milking.

POST-MILKING SPRAYING:

Immediately after milking, spray the entire surface of each teat of every cow with prepared solution.
