

# VANORINSE / VANOSAN

## Pipework and equipment

**VANORINSE** and **VANOSAN** are the Evans Vanodine solutions for chlorinated alkaline CIP cleaning of Dairy Parlours, Milking Machines, Robotic Milking, Bulk Milk Tanks, and all accessory pipework and equipment.

### **VANORINSE:**

Is the recommended cleaner for routine maintenance. Formulated with effective levels of chlorine and sodium hydroxide. It cleans thoroughly when used as part of a routine maintenance regime. Vanorinse is suitable for soft to medium-hard water areas, where it is stable up to 200 ppm calcium carbonate at temperatures up to 80°C.

### **VANOSAN:**

Is the heavy-duty cleaner, designed for all routine maintenance plus parlours in need of a deeper clean, removal of stubborn soiling, and operation in very hard water areas. Vanosan has powerful levels of chlorine and sodium hydroxide, containing 60% more alkalinity than Vanorinse. Vanosan cleans deeply and excels at removing persistent milk fats, especially in Bulk Milk Tanks. It is suitable for all levels of water hardness and is stable up to 400 ppm calcium carbonate at temperatures up to 80°C.

**VANORINSE** is a very effective chlorinated alkaline CIP Cleaner for routine maintenance, whilst **VANOSAN** is ideal for both routine maintenance and deep cleaning regimes.
